ABSTRACT

India has a huge number of telecommunication users compared to other nations. The telecom industry is facing severe competition which has led to just three major players in this sector. This turbulent competition began after JIO started offering free services which compelled the others to either shut their services or merge. In this paper, the researcher has tried to find the major factors that caused switching from a previous provider to a new provider in this Industry. The paper intends to study the factors responsible for brand switching behavior. This study will help understand the drivers of brand switching in this sector

Keywords: brand switching, price, network, promotion

INTRODUCTION

Telecommunication services is an integral part of our daily lives. Whether work or entertainment, data and network plays a very important role in lives of people. The era has come where a mobile handset is almost owned by everybody and for most people it's impossible to survive without network and connection of mobile services from the young kids to the older generation. This is one sector where switching is not as easy as switching a shampoo or an FMCG product. However still people switch for better facilities and one such big wave of switching happened after JIO entered the market with free services in India.

This caused major prominent long time players to merge or shut as they couldn't face the intense competition from the new entrant that came with a very low price strategy and captured almost the entire market.

Brand switching is basically when the consumers switch from one product to the other or one provider to the other in case of services. Apart from switching it's also important to retain consumers as it is rightly said that one consumer retained is one consumer gained. It's important to make consumers loyal to a brand which is possible only if the services given delight the consumers and give them way beyond what they expect.

Hence the Objectives for the Study Are -

- 1. To find the factors that have driven the consumer to switch their telecommunication brand.
- 2. To find is there is any relation between gender of a consumer and his reason to switch.

SCOPE OF THE STUDY

- 1. This study intends to understand the reasons why a consumer has switched his telecommunication brand.
- 2. It also tries to find if there is any relation between gender and the reason for switching.
- 3. The study is conducted in Mumbai Region
- 4. The study can be of use to telecom industries to devise strategies to retain consumers or poach consumers from the competitors.

Limitations of the Study

- 1. The study is restricted to Mumbai Region.
- 2. The findings are based on the sample under study
- 3. The study is limited to the behavior post entry of Reliance JIO

LITERATURE REVIEW

David Mazursky & Hebrew University Priscilla LaBarbera New York University,1987 "When consumers switch brands" indicated a considerable difference among experienced consumers' cognitive processes with respect to whether switching behavior is attributed to extrinsic motives (price, discount, coupon). It also speaks about intrinsic incentives which is a desire to try a new brand. In case of extrinsic incentives, the consumers are excited to switch even though they have higher level of satisfaction with the earlier brand, as compared to switching caused by intrinsic motives.

Kamat, Dinesh 2013 "" critical evaluation of customer satisfaction Pune" observed the reason for choosing a service provider differs across the demographic segment. The results from this study clearly explained some interesting and important consumer behavior and attitude of respondents. It was seen that majority of respondents preferred their current service provider because of high-quality 'network coverage'. The analysis supported the claim of different aspects influences in selecting service provider. This research showed that consumers always prefer a service provider having good network coverage, economical and quality of service followed by value- added services.

Ching-chow Yang (2003) "Establishment and applications of integrated model of service quality measurement, stated that customer satisfaction measurement in this study explains the strength and the area of improvement in the quality of product. Continuous improvement is one of the key secrets for a firm to practice to ensure best quality for its products. Through the constant improvement in performance, the enterprise can enhance customer satisfaction and upraise profits.

M. Satish, K.J Naveen, V. Jeevananthan, (2011), A Study on Consumer Switching Behavior in Cellular Service Provider: A Study with reference to Chennai recognized the factors that influence the consumers to switch the service providers. It is stated that is a relation between switching the service provider and the factors like customer service, frequent network trouble, soaring high call rates of the providers.

RESEARCH METHODOLOGY

The sampling technique used in this research is convenience sampling. There were 300 responses taken out of which the study was conducted only on those who switched their providers.162 respondents said that they had switched the provider.

The Data analysis done was of **descriptive and inferential type.** The researcher constructed the entire tool for the study which questions on what drove the consumer to switch his provider for which exploratory factor analysis was applied on the data of 162 responses to extract the major drivers that caused switching tendency.

Descriptive Analysis

The description of the sample is as follows –

Table 1: Scheme of Telecom Service

	Table 10 Seneme of Telecom Service								
		Frequency	Percent	Valid Percent	Cumulative Percent				
	BOTH PREPAID AND	1	.6	.6	.6				
	POSTPAID IN TWO								
	DIFFERENT NUMBERS								
Valid	Post Paid	36	22.2	22.2	22.8				
	Prepaid	124	76.5	76.5	99.4				
	WIFI CALLING	1	.6	.6	100.0				
	Total	162	100.0	100.0					

Table 2: Switching pattern

		Frequency	Percent	Valid Percent	Cumulative Percent
	More than Thrice	9	5.6	5.6	5.6
	Once	99	61.1	61.1	66.7
Valid	Thrice	10	6.2	6.2	72.8
	Twice	44	27.2	27.2	100.0
-	Total	162	100.0	100.0	

Table -3 Occupation

	Tuble b Occupation								
		Frequency	Percent	Valid Percent	Cumulative Percent				
	Government employee	7	4.3	4.3	4.3				
	housewife	10	6.2	6.2	10.5				
	Private employee	43	26.5	26.5	37.0				
Valid	Retired	1	.6	.6	37.7				
	Self employed	22	13.6	13.6	51.2				
	student	79	48.8	48.8	100.0				
	Total	162	100.0	100.0					

Table 4: Marital Status

		Frequency	Percent	Valid Percent	Cumulative Percent
	married	40	24.7	24.7	24.7
Valid	Unmarried	122	75.3	75.3	100.0
	Total	162	100.0	100.0	

Table 5: Gender

		Frequency	Percent	Valid Percent	Cumulative Percent
	1.0	95	58.6	58.6	58.6
Valid	2.0	67	41.4	41.4	100.0
	Total	162	100.0	100.0	

Inferential Analysis

Factor analysis was applied on all the variables that were likely to have caused switching of the provider with the intention to extract the major factors that caused switching.

- H1- The correlation matrix is identity matrix
- **H0-** The correlation matrix is not identity matrix

The above test results state alternate hypothesis is accepted for value added services, better call connection, better customer support and more roaming services and network as the P value is <=0.05where its seen with this sample that females have switched due to the above factors compared to male.

FINDINGS AND MANAGERIAL IMPLICATIONS -

One customer retained is one customer gained. In this era of competition where consumer enjoys ultimate benefit out of the competition, it's important to implement adequate strategies to avoid brand switching and retain the consumer and ultimately make the consumer loyal to the brand. On this study the Exploratory factor analysis gave results stating that three factors are most important which drove the consumers to change their provider –Value for money, Brand image and word of mouth, Quality of service. The providers must ensure that they delight the consumers with their service on aspects like calling, service, customer care which will in turn develop a good brand image that will cause a favorable word of mouth promoting the brand and inducing the customers to switch. Also as in the telecommunication sector switching is not as easy as switching an FMCG

product extreme value for money strategies can induce the customers to switch as customers are constantly looking out for value. Hence whether a telecommunication provider wants to retain consumers or is looking at poaching consumers of the competitor it's important to give value for money, amazing services and create a distinct and positive brand image by either providing free services or positioning very well in the minds of consumers.

Also the retention strategies should me more female centric as its clearly seen that females have switched more due to service parameters. Hence the companies can look at strategies to retain female consumers by special offers during specific days like mother's day, woman's day related to female such that they could build brand loyalty among the female consumers.
